      <center>
        
      </center>
      <p>User understanding of the content of a website often depends on
user understanding of how the website works. This is part of the user
experience design. User experience is related to layout, clear instructions
and labeling on a website. How well a user understands how they can interact
on a site may also depend on the interactive design of the site. If a user
perceives the usefulness of the website, they are more likely to continue
using it. Users who are skilled and well versed with website use may find a
more distinctive, yet less intuitive or less user-friendly website interface
useful nonetheless. However, users with less experience are less likely to see
the advantages or usefulness of a less intuitive website interface. This
drives the trend for a more universal user experience and ease of access to
accommodate as many users as possible regardless of user skill.</p>
```

```
<p><u>Part of the user interface design is affected by the quality of  
the page layout.</u> For example, a designer may consider whether the site's  
page layout should remain consistent on different pages when designing the  
layout. Page pixel width may also be considered vital for aligning objects in  
the layout design. The most popular fixed-width websites generally have the  
same set width to match the current most popular browser window, at the  
current most popular screen resolution, on the current most popular monitor  
size. Most pages are also center-aligned for concerns of aesthetics on larger  
screens.</p>

  <p>
    "Blogger for Word" is an add-in for Microsoft Word which allows
users to save a Microsoft Word document directly to a Blogger blog, as well as
edit their posts both on- and offline. As of January 2007, Google says
"Blogger for Word is not currently compatible with the new version of
Blogger", and they state no decision has been made about supporting it with
the new Blogger.Blogger has launched mobile applications for users with mobile
